

Instant Fire Department Access Without Damaging the Door or Building.

The Kidde Rapid Entry System is designed to help fire departments and businesses work together to preserve lives and property. It makes response more efficient as responders have fast access to necessary building keys in emergency situations.

[RapidLockBox.com](https://www.RapidLockBox.com)

Here's how the Rapid Entry System works:

1. The building owner purchases a lock box and mounts it near the entrance. Fire department officials lock building keys in the lock box.
2. To ensure absolute security, Kidde has developed a flexible program for shipping lock boxes directly to building owners. Special security keys are supplied only to authorized fire department officials.
3. When a fire alarm sounds at night or on the weekend, the fire department has instant access to the building. Access is fast, easy and safe without the need for the building owner or tenant to drive to the site after hours.

The SupraSafe line by Kidde offers a variety of sizes, styles and features. Building owners can custom-tailor a Rapid Entry System to meet their needs.

Help make it safer for the fire department to protect property and reduce injuries; avoid the expense of replacing a costly door or window due to unnecessary forced entry.
